

MOHD SAIF HUSSAIN

Hyderabad, India | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Operations and systems professional with 9+ years of experience across product support, technical issue escalation, data quality, process governance, and AI operations at Microsoft, Apple, Amazon, and GlobalLogic. Experienced in identifying systemic issues, conducting root-cause analysis, managing high-volume support workflows, and translating operational problems into actionable escalations for product and engineering teams. Highly adept at AI orchestration, with hands-on experience directing AI-assisted technical workflows and applying human-in-the-loop verification to mitigate model sycophancy, context drift, hallucinations, and unverified outputs.

PROFESSIONAL EXPERIENCE

Operations Manager

Jan 2026 – Apr 2026

Aeronaut Fans Industry Pvt Ltd., Balanagar, Hyderabad

- Built ISO 9001:2015 quality management system from scratch for a 12-person precision engineering manufacturer, covering SOPs, risk register, document master list, audit checklists, and Excel-based operational trackers with the help of AI.
- Managed procurement engineer, Production Engineer, quality engineer, and 6 factory employees, tracked procurement for Axial Fans, coordinated with vendors, and ensured all materials and processes complied with ISO and ISI standards.
- Standardized cross-departmental process documentation using AI-assisted workflows with strict human-in-the-loop oversight to eliminate hallucinations and unverified outputs.

Data Annotation Specialist

May 2021 – Jun 2025

Microsoft, Hyderabad

- Evaluated outputs from large language models across text classification, summarization, and safety-labeling tasks, maintaining 99% accuracy across high-volume review cycles.
- Developed and updated annotation guidelines achieving 98% annotator adoption rate, reducing review errors by 12% through proactive guideline improvements and calibration sessions.
- Troubleshoot escalations on AI assistant outputs, filing bugs to engineering and tracking issues to resolution; ran regular sessions with annotators to land policy updates.
- Evaluated domain-specific audio annotation datasets across Medical, Enterprise, and Automated Driving Assistance pipelines to ensure customer-tailored model accuracy.

Annotation Analyst

Nov 2019 – Oct 2020

Apple, Hyderabad

- Selected for 15-person pilot annotation team whose structured feedback directly shaped AI assistant response quality guidelines.
- Graded and annotated AI assistant outputs for accuracy, tone, and policy compliance across high-volume daily review queues.
- Built a VBA macro to auto-detect routine grading cases, reducing manual classification effort and improving throughput consistency.

Catalog Lead | Amazon, Hyderabad

Jul 2018 – May 2019

- Automated scripts and resolved 800 trouble tickets, saving 30 man-days from Weeks 1–22, 2019.
- Identified and recommended solutions for product-level bugs, managed escalations, and provided interim resolutions in partnership with product and technical teams.
- Analyzed workflows to identify process improvements, increasing operational efficiency by 3% by the end of 2018; onboarded and trained 3 new hires to 98% accuracy within 4 weeks.

Business Operations Specialist | Amazon, Hyderabad

Nov 2016 – Jul 2018

- Identified a systemic Brand Registry blocker preventing approved customers from receiving entitled benefits; conducted root cause analysis, developed a manual workaround to unblock affected accounts, escalated findings to the software development team, and validated the resulting fix. Received the Moonwalker Award for providing actionable insights to the tech team.
- Served as a point of contact between Operations and Product teams, conducting process analysis and driving improvements in quality and process clarity.

- Improved workflow quality from 96% to 99% through structured process reviews, escalation workflows, and targeted team coaching.

Senior Analyst

Jan 2015 – Oct 2016

GlobalLogic, Hyderabad

- **Process Standardization & Mentorship:** Authored troubleshooting SOPs and mentored 100+ junior analysts on project rotations, reducing escalation error rates and standardizing issue handling across shift handoffs.
- **24/7 Rotational Operations & SLAs:** Managed high-volume product support queues in 24/7 rotational shifts, consistently achieving **99%+ quality accuracy** and exceeding strict SLA benchmarks across 7+ concurrent project workflows.
- **Stakeholder Communication:** Served as an operational liaison between cross-functional teams and international stakeholders, providing daily reports, escalation updates, and calibration insights to align product policies.

PORTFOLIO PROJECTS

Delivery-Engine

- **AI Governance & Engine Architecture:** Designed a governance-first AI engine using deterministic execution tools, dual cryptographic human approval gates, and a hash-verified Findings Store to prevent data fabrication.
- **Standards & Compliance:** Aligned system guardrails to **EU AI Act Article 14**, **NIST AI RMF**, and **ISO/IEC 42001:2023**; built a production leakage sentinel and pre-registered statistical inference rules.
- **Production Codebase:** Authored 8 executable TOML playbooks, non-engineer adoption docs, and **419 unit tests** (mypy strict, ruff clean, Docker, GitHub Actions CI).
- **Adversarial Prompting & Agent Alignment:** Directed Claude and Claude Code through iterative development and debugging while applying human-in-the-loop source verification and adversarial testing to mitigate sycophancy, context drift, hallucinations, and unverified outputs.

Delivery-Engine-FDE Case-Study

archived public record

with live documentation site

- Documented an eight-step workflow translating an ambiguous customer request into a sealed, re-performable evidence package, including analysis, verification, delivery, and feedback of field learnings into the product.

AnalystKit

- Built an 8-command, DAMA-DMBOK aligned Python data quality toolkit on **PyPI** featuring reviewer-grade reconciliation workpapers (**53 unit tests**, mypy strict). Used as a core dependency in Delivery Engine.

OpsKit

- Built an operational playbook toolkit for variance detection and WoW driver analysis, generating Excel reports with re-performable methodology tabs (**18 unit tests**, GitHub Actions CI).

SKILLS

Process and Documentation: SOP development, ISO 9001:2015 QMS, audit checklists, risk registers, root cause analysis

Data Quality: DAMA framework, data reconciliation, variance detection, structured issue reporting

Tools: Microsoft Excel, Word, PowerPoint, SharePoint, Google Sheets.

Programming and AI: Foundational SQL and Python; AI-assisted development and pair programming.

Platforms: Annotation and labeling platforms, Claude, Claude Code, NotebookLM, Microsoft Copilot, GitHub.

EDUCATION

M.Tech, Computer Science

Shadan College of Engineering and Technology

Graduated 2015

JNTU-Hyderabad
